Electronic — Amazon product bundles

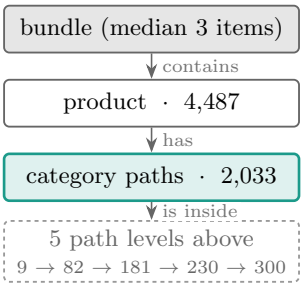

train 1,211 bundles
val 173 · test 346 queries
seeds 2 → held out 1
81% of items in training
features: TF-IDF of titles
(none released)

Food — Amazon grocery bundles

train 1,232 bundles
val 176 · test 353 queries
seeds 2 → held out 1
79% of items in training
features: TF-IDF of titles
(none released)

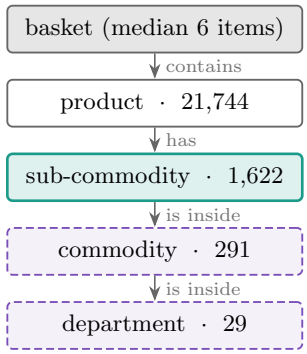

Clothing — Amazon fashion bundles

train 1,294 bundles
val 184 · test 371 queries
seeds 2 → held out 1
77% of items in training
features: TF-IDF of titles
(none released)

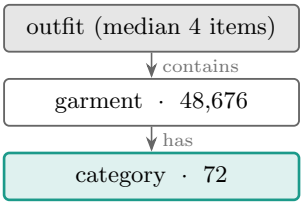

62% of products have several category paths; the label is the whole set, so most labels hold a single product

Dunnhumby — grocery baskets

train 19,973 baskets
val 2,853 · test 5,707 queries
seeds 4 → held out 3
97% of items in training
features: TF-IDF of department, commodity, sub-commodity, brand
(none released)

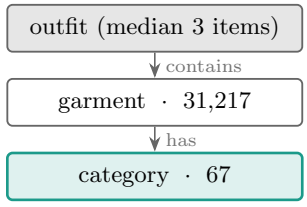

POG — iFashion outfits

train 14,000 outfits
val 2,000 · test 4,000 queries
seeds 2 → held out 2
75% of items in training
features (released): BLIP image and text embeddings

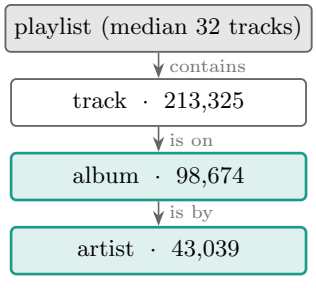

categories are hashed IDs: no names, no hierarchy

POG_DENSE — iFashion outfits, denser subset

train 20,780 outfits
val 2,968 · test 5,938 queries
seeds 2 → held out 1
78% of items in training
features (released): BLIP image and text embeddings

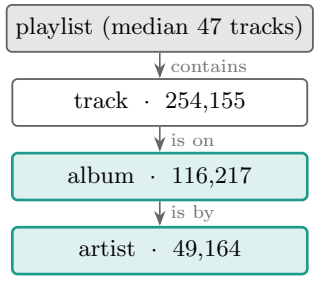

Spotify_sparse — playlists

train 8,740 playlists
val 1,248 · test 2,498 queries
seeds 16 → held out 16
79% of items in training
features (released): CLAP audio and text embeddings

97.7% of albums have one artist; both levels are used as labels

Spotify — playlists

train 14,000 playlists
val 2,000 · test 4,000 queries
seeds 23 → held out 23
80% of items in training
features (released): CLAP audio and text embeddings

97.7% of albums have one artist; both levels are used as labels

label level DIALS uses — in item text features only — in the data, not used

Counts are distinct values; seeds and held out are median sizes of a test query; "in training" is the share of catalogue items in at least one training bundle.
